On the basis of the PBS t-RNA motif used for the classification of human changenous retrovirus (HERV9) the full length endogenous provirus which endogenous retrovirus (HERV9) the full length endogenous provirus which was been located on the long arm of human chromosome 7 (7021-22) has been certificated HERV-W. The present invention describes proteins or peptides (I) having superantigen (SA9) activity comprising the ENV protein (ENV) of HERV-W, the surface protein (SU) and transmembrane (TW) sub-units. (I) have neuroprotective activity, and can be used in: vaccines; antisense-therapy; and HERV-W SA9 activity-inhibitors. (I) and encoding DNA/RNA are useful for diagnosing multiple sclerosis (MS) or HERV-W-associated disorders. (I) are also useful for identifying substances and optionally crowering) capable of binding to a retroviral superantigen associated with MS, substances capable of blocking transcription or translation of HERV-W retroviral superanting an immune response capable of blocking transcription or translation of HERV-W retroviral SA9 is useful in therapy. Nucleic act adding to a retroviral capable of blocking sA9 activity, appable of blocking transcription or capable of blocking transcription or capable of blocking sA9 activity. Appable of blocking transcription or translation of HERV-W retroviral superantigen for use in treating or preventing MS, obtained using (I) are useful for the treatment and prevention of MS. (I) and nucleic acids encoding them are useful for another the present encodes the

                                                                                                                                                                                                                                                                    Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human cervical epithelial cells.
                                                                                                                                                                                                                                                                                                                                              The present invention relates to human single exon nucleic acid probes (SENP). The present sequence is one such probe. The SENPs are derived from human HeLa cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human genome-derived single exon nucleic acid probes useful for analyzing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        09
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to single exon nucleic acid probes (SENP). The present sequence is one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AATTCAAGGTCGAATATAACGTAGCAAAGGAGCTGCAAAACACTGGACCCTGGGGCCT

                                                                                                                                                                                                                                                                                                          The present invention relates to single exon nucleic acid probes for measuring human gene expression in a sample derived from human heart. The present sequence is one such probe. The probes may be used for present sequence is one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. By measuring gene expression, the probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human heart and vascular system e.g. cardiovascular disease, hypertension, cardiac arrhythmias and congenital heart disease. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                             ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                셤
                                                                                                                                              The invention relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expression in a sample derived from human breast and BT 474 cells. The method involves contacting the probes with a collection of detectably labelled nucleic acids derived from mRNA of human breast, and then measuring the label bound to each probe of the microarray. The probes are useful for verifying the reach of regions of genomic DNA predicted to encode proteins. They are useful for gene discovery, and for determining predisposition and/or prognosing breast disease. Gene expression analysis is useful for assessing the toxicity of chemical agents on cells. The microarray of this invention presents a far greater diversity of probes for measuring the invention presents a far greater diversity of probes for measuring microarrays. The method is suitable for rapid production of functional information from genomic sequence. The present sequence is a single exon nucleic acid probe of the invention. Note: The sequence data for this part did not form part of the printed specification, but was obtained the invention of the invention of the invention approach.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1140
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1200
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1260
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1440

The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to measure gene expression in bone marrow asmples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is one of the probes of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       831
The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human brain. They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is one of the probes of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a single exon nucleic acid probe (SENP) (I) for measuring human gene expression in a sample derived from human adult liver, comprising one of 13109 defined nucleotide sequences given in the specification (or complements/ fragments). The probe hybridises at high stringency to a nucleic acid molecule expressed in the human adult liver. (I) may be used for predicting, measuring and displaying gene expression in samples derived from human adult liver. The genes identified may be involved in genetic liver diseases such as cirrhosis, hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia. Which is associated with coronary heart disease. ABSISIOII-ABSISIOS represent human liver single exon nucleic acid probes of the invention. Note: The sequence information for this parent does not appear in the printed appearint was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ij
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       961 TCAAAATCGAAGAGCTTTAGACTTGCTAACCGCGAAAGCGGGGAACCTTTTTATTTT 1020

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to novel single exon nucleic acid probes. The present sequence is one such probe. The probes are useful for measuring human gene expression in a human breast sample, where the probe hybridises at high stringency to a nucleic acid expressed in the human breast. The probes are useful for predicting, diagnosing, grading, particularly those diseases with polygenic actiology. The diseases include: breast cancer, disorders of development, inflammatory diseases of the breast, fibrocystic changes, proliferative breast disease and noncarding tumours. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

The invention relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expression in a sample derived from human lung comprising single exon nucleic acid probes having one of 12614 nucleic acid sequences mentioned in the specification, or their complements or the 12819 open reading frames derived from the 12614 probes. Also included are a microarray comprising the novel set of probes of the human lung, manaling at high stringency to a nucleic conflection of detectably labeled nucleic acids derived from human lung manaly, and (b) measuring the label detectably bound to each probe of the array, identifying exons in a eukaryotic genome, comprising (a) and principly prodicting at least one exon from genomic sequences of the enkaryote; and (b) detecting specific hybridisation of detectably and (b) measuring the label detectably bound to each probe of the enkaryote; and (b) detecting specific hybridisation of detectably a rangorithmically prodicting at least one exon from genomic sequences of the enkaryote; and (b) detecting specific hybridisation of detectably having a fragment identical to the predicted exon, the probe is included comprising (a) measuring the expression of each of the exons in several comprising (a) measuring the expression of each of the exons in several comprising (a) measuring the expression of each of the exons in several microarrays having a probe with the exon, where a common pattern of the exons should be assigned to a single gene; a peptide comprising one of the exons in the tissues and/or cell types using ptyx diseases such as such an alygis, and for identifying exons in a gene; particularly using human companies, or the exons should be assigned to a single gene; a peptide comprising or analygis, and for identifying exons in a gene; particularly using human companies, pulmonary hamanes, particularly using human companies, pulmonary hamanes, pulmonary particularly using human pattern squence farmed for this patent did not form part of the print of the exo specification, but was obtained in electron: at ftp.wipo.int/pub/published\_pct\_sequences

New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess WPI; 2001-639362/73. P-PSDB; ABG13126. biodiversity

Claim 1; SEQ ID NO 13117; 103pp; English

The invention relates to isolated polynucleotide (I) and polypeptide (II)

```
sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymuclectides are also used in diagnostics as expressed sequence tags for identifying expressed carbon (II) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food polypeptide in tissue, as molecular weight markers and as a food of stess expressing (II). (I) and its binding partners are useful in medical imaging of stess expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodivarity responsible for genetic disorders or other traits to assess biodivarity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this electronic format directly from WIPO at the private of product format directly from WIPO at the private of products dependent on DNA and electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1749

                                                                                                                                                                                                                                                                                            2313
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PRR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed activity of (II) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a

(II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic ording sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at the wipo.int/pub/published\_pct\_sequences 69 GCCTGAGAGCACAGCGGGAAAGGATTGGGATATAAACTCAGGCATTCAAGCCAGG AACAGCAACCCCCTTTGGGTCCCCTCCCATTGTATGGGAGCTCTGTTTTCACTCTATTTC TCCCTTTGGATCCAGCAGAGTGTCCACTGTGCTCCTGATCCAGCGAGGTACCCATTGCCA 662 ccccrccagarargecaggererccecrecerrrcreararaccaaggegececearargece creccaaregeerraaageereecearrerrecrecaregeraagreecegerregee AGCTCACTAAAATGCTAATCAGGCAAAAACAGGAGGTAAAGCAATAGCCAATCATCTTT AACGACTACCCTCTTTTCCCTCCCTTTTCTATCCCACCTCTGTTTTCACTCTATTAA ACTCTATTAAATCATGCAACTGCACTCTTCTGGTCCGTGTTTTTTTATGGCTCAAGCTGAG ATCTTGCAACTGCA-----CACTCTTCTGGTCTGTTTTGTTACGGCTCGAGCTGAG CTTTTGTTCGCCATCCACCACTGCTGTTTGCCACCGTCACAGACCCGCTGCTGACTTCCA CTCCCGATCAGGCTAAAGGCTTGCCATGTTCCTGCATGGCTAAGTGCCTGGGTTTGTCC rereagergeacaacereracaececeaarreageaggaageagringagegeregre 190 geccaacreccaacacacrragerrrrecrerreagargegeacreagacage 370 AĞCCCGCTAAAATGCTAATTAGGCAAAACAGGAGGTAAAGAAATAGCCAATCATCTATT 321 TAGTICTICAAATGGAACCCCAGATGCAGTCCATGACTAAAATCTACCGTGGACCCCTGG 10 TAAAACTACAAATGGAGCCCAAGATGCAGTCCAAGACTAAGATCTACGAGACCCTGG 381 ACCGGCCTGCTAGACTATGCTCTGATGTTAATGACATTGAAGTCACCCCTCCCGAGGAAA TCTCAACTGCACAACCCCTACTACACTCCAATTCAGTAGGAAGCAGTTAGAGCAGTTGTC AGCCAACCTCCCCAACAGTACTTGGGTTTTCCTGTTGAGAGGGTGGACTGAGAGAACAGGA CTAGCTGGATTTCCTAGGCTGACTAAGAATCCCNAAGCCTANCTGGGAAGGTGACCGCAT CCATCTTTAAACATGGGGCTTGCAACTTAGCTCACCCGGACCAATC-----AGAG Gaps 17; Length 893; Seguence 893 BP; 223 A; 264 C; 202 G; 204 T; 0 U; 0 Other; 49.0%; Score 651; DB 5; Length 89 85.0%; Pred. The present invention relates to new nucleic acid sequences of human endogenouse retrovirus, HERV-7q, which is located on chromosome 7q. Regulatory elements associated with HERV-7q may alter expression of other genes (even remote genes) on the same chromosome, inducing immunological and/or neurological changes (which may be pathological or protective/curative). HERV-7q peptides can be used to improve efficiency of the immunotherapy. HERV-7q peptides and their coding sequences can be used in immunogenic or vaccinating compositions, for protection against autoimmune diseases, particularly multiple sclerosis. The peptides may also be used (by sequence comparison) to detect/identify endogenous retroviruses that are abnormally expressed in cancer, neuropathologies or other autoimmune diseases. The present sequence was 841 New nucleic acid sequences of human endogenous retrovirus, HERV-7q, use for diagnosis, treatment and prevention of autoimmune and neurological ATCTGGAATCATTACTGAGAAAGTTAAAGAAATTTGAGATCGAATATAATGTAGAGCAGA TCAAAATCGAAGAGCTTTAGACTTGCTAACCGCCAAAAGAGGGGGAACCTGTTTATTTT ----TATGTTAATCA Gaps Sequence 46340 BP; 16104 A; 8738 C; 8434 G; 13064 T; 0 U; 0 Other; Length 46340; 46; AATAGAGCTATAACACTCACCGCATGGCCCAAGATTCCATTCCTTGGTATC Autoimmune disease; HERV-7q; chromosome 7q; immunotherapy; Indels 88; DB 3; Score 643.4; DB 3; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          à
                                                                                                                                                                                                                                                                                                                                                         Sequence 15497, Application US/09949016

Patent No. 6812339

GENERAL INFORMATION:
PAPLICANT: VENTER, J. Craig et al.
TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF
FILE REFERENCE: CL001307
CURRENT APPLICATION NUMBER: 60/241,755
PRIOR FILING DATE: 2000-10-20
PRIOR FILING DATE: 2000-10-03

patent No. 6812339

GENERAL INFORMATION:
APPLICANT: VENTER, J. Craig et al.
TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF;
FILE REFERENCE: CLOOL1307
CURRENT APPLICATION NUMBER: 60/241,755
PRIOR FILING DATE: 2000-04-14
PRIOR APPLICATION NUMBER: 60/241,755
PRIOR FILING DATE: 2000-10-20
PRIOR FILING DATE: 2000-10-03
PRIOR FILING DATE: 2000-0-08
NUMBER OF SEQ ID NOS: 207012
SOFTWARE: FastSEQ for Windows Version 4.0
